

AGATA DAQ EVO meeting

March 11th, 2011

Presents : Y. Aubert, D. Bazzacco, N. Dosme, X. Grave, L. Guevara, M. Gulmini, A. Korichi, D. Mengoni, S. Pietri, O. Stezowski,

Apologies for absence : E. Legay, Ch. Theisen, P. Molini

1. Status reports on the DAQ

Sunxfire is now ok and maintenance will happen week 17 (26th of April and dates are ok with Enrico)-

Upgrade of the operating system (Debian Squeeze) is planned together with raid reconfiguration

Sun oracle maintenance has been contacted for the broken storage disk and replacement is ok

Since the EVO a lot of progress on ADF (Olivier's e-mail sent to DAQ-All on the 18th of march)

Slow control : on progress and work still underway

“Loop” feature in the Narval script system has been implemented and tested at Legnaro.

Development in ADA1 on going for the evolution of the event builder

Replay Data centre : investigations are still underway at CSNSM for the Cloud System computing existing at LAL

2. Actions and requests :

Several modifications on the libraries have been performed by D.B in connexion with the Pre-processing and PSA filters.

Implementation of a kind of event building for easy access to the users

A Fortran compiler is requested

Access to the last ADF version is needed
